## OVERVIEW

The SRD991 consists of a **basic device** with a digital controller that supports different **communication protocols** (or also simply 4-20 mA input). Into this basic device, **additional equipment** can be built such as plug-in cards for electrical input/output signals, position feedback and pressure sensors.

The pneumatic part is available in different versions (**single / double acting** or **spool valve**). For very large actuators, **boosters** with increased air capacity can be flanged on. Also, different **manifolds** for connection of gauges can be flanged on. For the pneumatic screw connections, we offer different threads in the housing and adapters.

For use in **hazardous areas**, there are approvals according to ATEX, FM, CSA, etc.

The device can be configured locally by means of push buttons and **LCD** / LED, or with PC + EDC82 Modem connected to the service plug of the SRD991. By means of communication, the device can be configured remotely via FDT/DTM.

A large variety of attachment kits for all common valves and actuators are available. The list "AttachmentKits.pdf" is updated continuously and can be found on the Internet [here](#).

For high temperature or high vibration application, we recommend to mount the SRD991 **remotely** and not directly on the valve. For this, use the potentiometer unit (like the SRI990 - TXQxxxxx - H).

Please consult [TI EVE0105\\_R](#) for specifications.

To ensure the high performance of the positioner, we offer **Advanced Diagnostics** and **Premium Diagnostics** utilities:

## Special Versions of SRD991:

### SRD991 Stainless Steel Housing

To be order with model code SRD991-xxxxxx-Zxxx

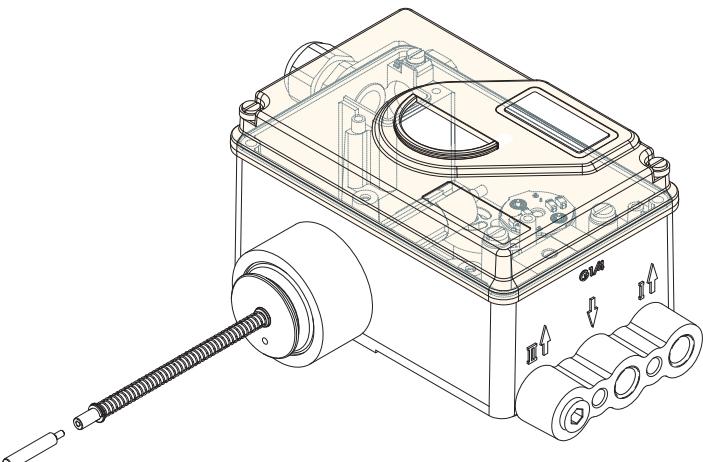

Please consult [TI EVE0105 INOX](#) for specifications.  
For dimensional drawings see page 33.

### SRD991 for Top Mounting onto small actuators

This version is designed for direct mounting on top of small actuators without yoke - solution for actuators up to 50 mm stroke.

Instead of the rotary potentiometer, a linear pot is used that feeds back the actual position of the actuator.

The Model Code of this basic device is  
SRD991- ..... -W

The adapter part is dependent on the manufacturer and type of actuator and can be ordered under the code  
EBZG-TMxx.

Please consult us for the latest list of available adapter parts.

### SRD991 designated for PST (Partial Stroke Test for Emergency Shut Down)

Final control elements in Emergency Shutdown (ESD) applications such as ON-OFF-, Blow Down and Venting-valves remain in one position over a long time without any mechanical movement. These valves can show a tendency to get stuck and as a result might not operate upon demand. This can have a severe impact on the functionality of a Safety System and could result in an adverse condition to the operating personnel, plant equipment and the environment. The Partial Stroke Test (PST) offers operators a tool to identify the troubleshooting function of ESD valves. The test can be easily executed via the FDT-DTM based configuration diagnostic tool VALcare™/Valve Monitor.

Please consult [TI EVE0105 PST](#)

## Entry for remote potentiometer

(for remote mounting main unit)

– Code D

This remote application is used in applications where high temperatures or vibration are present and can result in negative influences to the control. It can also be used in places not easy to reach, to ensure an easier handling of the unit, or for cylinders with large strokes.

The Positioner SRD991 (Remote unit) is mounted far away from the valve or cylinder in a safe environment.

The Potentiometer unit is mounted on the valve or cylinder. This potentiometer unit can be made of a derivative version of the SRI990 positioner (only potentiometer in the housing) or of an external potentiometer like a linear potentiometer for application onto cylinders, for example.

This option is to be used with a potentiometer unit 3 wires system with ca. 5 kOhm resistance.

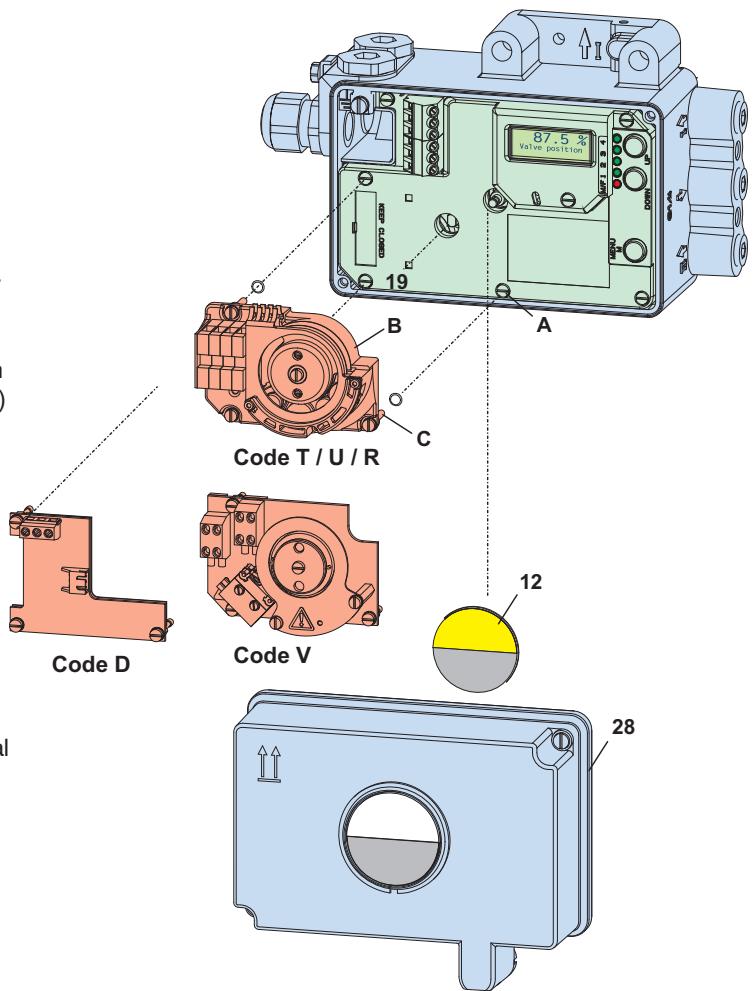

If the following requirements are observed, the set-up is insensitive to electrical disturbances caused by high electromagnetic fields, EMC and HF-radiation.

Cable Length max. . . . . 10 m (32 ft)

Cable Specification (not supplied by Foxboro Eckardt):

- 3-wire twisted pair, shielded
- Shield needs to be connected on both ends to the internal ground
- Shield endings need to be kept very short when connecting to the ground
- A HF cable gland is not required

For more information about remote mounting please consult [TI EVE0105\\_R](#).
