NOTE: all sensors are tested at ambient environmental conditions, with 47 ohm load resistor, unless otherwise stated. As applications of use are outside our control, the information provided is given without legal responsibility. Customers should test under their own conditions, to ensure that the sensors are suitable for their own requirements.

## **NO2-A43F Performance Data**

## Figure 2 Sensitivity temperature dependence

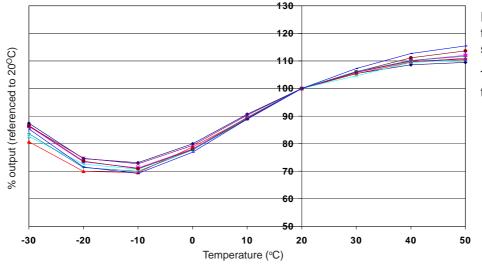

Figure 2 shows the temperature dependence of sensitivity at  $2ppm NO_2$ .

This data is taken from a typical batch of sensors.

## Figure 3 Zero temperature dependence

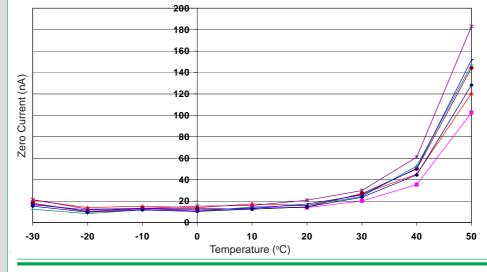

Figure 3 shows the variation in zero output of the working electrode caused by changes in temperature, expressed as nA.

This data is taken from a typical batch of sensors.

Contact Alphasense for futher information on zero current correction.

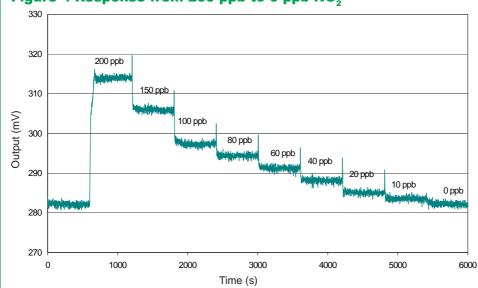

Figure 4 Response from 200 ppb to 0 ppb NO<sub>2</sub>

Figure 4 shows response from from 200ppb  $NO_2$  to 0ppb  $NO_2$ .

Use of Alphasense AFE circuit reduces noise to 15ppb, with the opportunity of digital smooting to reduce noise even further.

Offset voltage is due to intentional AFE circuit electronic offset.
