

FMP series

Maximum pressure up to 320 bar - Flow rate up to 475 l/min

FILTER SIZING

The correct filter sizing have to be based on the variable pressure drop depending by the application. For example, for the return filter the pressure drop have to be in the range 0.4 - 0.6 bar.

The pressure drop calculation is performed by adding together the value of the housing with the value of the filter element. The pressure drop in the housing is proportional to the fluid density (kg/dm^3); all the graphs in the catalogue are referred to mineral oil with density of $0.86 \text{ kg}/\text{dm}^3$.

The filter element pressure drop is proportional to its viscosity (mm^2/s), the corrective factor Y is related to an oil viscosity different than $30 \text{ mm}^2/\text{s}$.

Sizing data for single cartridge, head at top

Δp_c = Filter housing pressure drop [bar]

Δp_e = Filter element pressure drop [bar]

Y = Multiplication factor Y (see correspondent table), depending on the filter element size, on the filter element lenght and on the filter media

Q = flow rate (l/min)

V1 reference viscosity = $30 \text{ mm}^2/\text{s}$ (cSt)

V2 = operating viscosity in mm^2/s (cSt)

$\Delta p_e = Y : 1000 \times Q \times (V2/V1)$

$\Delta p_{\text{Tot.}} = \Delta p_c + \Delta p_e$

Calculation examples with HLP Mineral oil Variation in viscosity

Application data:

Top tank return filter

Filter with in-line connections

Pressure $P_{\text{max}} = 10 \text{ bar}$

Flow rate $Q = 120 \text{ l}/\text{min}$

Viscosity $V_2 = 46 \text{ mm}^2/\text{s}$ (cSt)

Oil viscosity = $0.86 \text{ kg}/\text{dm}^3$

Required filtration efficiency = $25 \mu\text{m}$ with absolute filtration

With bypass valve and $1 \frac{1}{4}$ " inlet connection

From the working pressure and the flow rate we understand it should be possible using the following top tank return filter series: MPT, MPH and FRI. Let's proceed with MPT series.

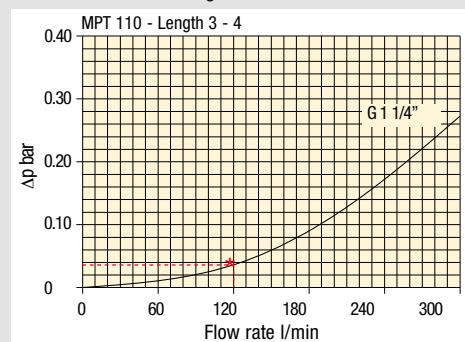

The size 20 doesn't achieve the required flow rate, therefore we have to consider the size 100. The final version of size 100 (101, 104, 110, 120 and 114) will be then defined in function of the mounting characteristics.

$\Delta p_c = 0.03 \text{ bar}$ (★ see graphic below, considering size 100 with the max available lenght to get the lowest pressure drop)

$\Delta p_e = (2.0 : 1000) \times 120 \times (46/30) = 0.37 \text{ bar}$

$\Delta p_{\text{Tot.}} = 0.03 + 0.37 = 0.4 \text{ bar}$

The selection is correct because the total pressure drop value is inside the admissible range for top tank return filters. It is of course possible trying to find a different solution, according to the mounting position or to other commercial need, repeating the previous steps while using a different series or lenght.

Filter housings Δp pressure drop.

The curves are plotted using mineral oil with density of $0.86 \text{ kg}/\text{dm}^3$ in compliance with ISO 3968. Δp varies proportionally with density.

Corrective factor

Corrective factor Y, to be used for the filter element pressure drop calculation.

The values depend to the filter size and lenght and to the filter media.

Reference viscosity $30 \text{ mm}^2/\text{s}$

Selection Software FILTER SIZING

Step ① Select "FILTERS"

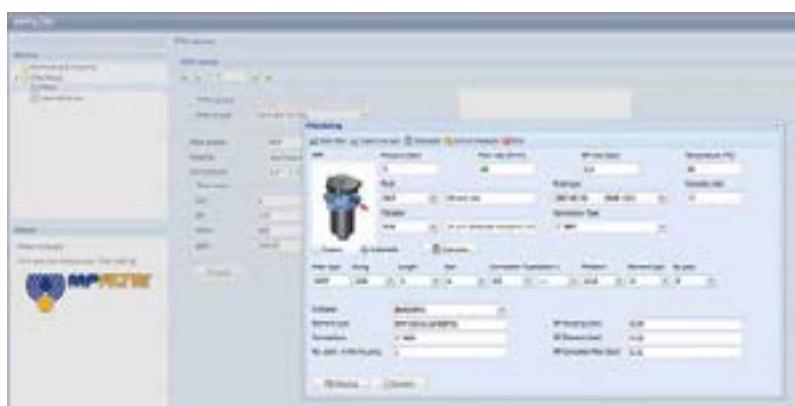

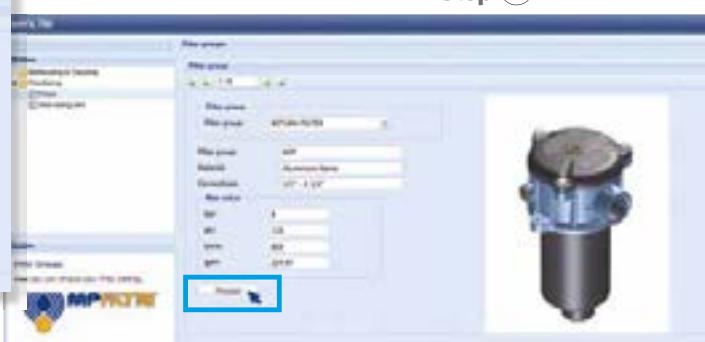

Step ② Choose filter group (Return Filter, Pressure Filter, etc.)

Step ③ Choose filter type (MPF, MPT, etc.) in function of the max working pressure and the max flow rate

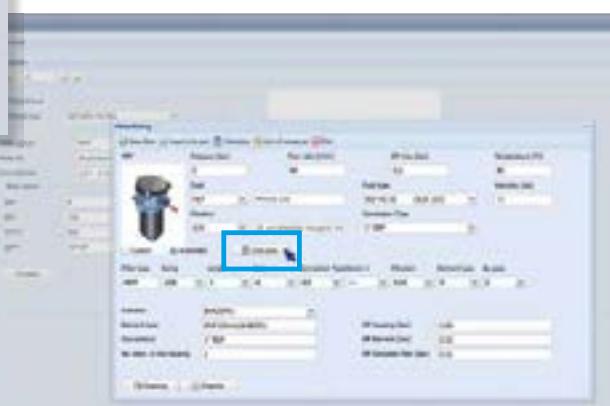

Step ④ Push "PROCEED"

Step ⑤

Insert all application data to calculate the filter size following the sequence:

- working pressure
- working flow rate
- working pressure drop
- working temperature
- fluid material and fluid type
- filtration media
- connection type

Step ⑥

Push "CALCULATE" to have result;
in case of any mistake, the system
will advice which parameter is out
of range to allow to modify/adjust
the selection

Step ⑦

Download PDF
Datasheet "Report.aspx" pushing the button "Drawing"

FMP series

Maximum pressure up to 320 bar - Flow rate up to 475 l/min

FMP GENERAL INFORMATION

Technical data

High Pressure filters Maximum pressure up to 320 bar - Flow rate up to 475 l/min

Filter housing materials

- Head: Phosphatized cast iron
- Housing: Phosphatized steel
- Bypass valve: Brass
- Reverse Flow: Steel (only for series FMP 320)
- Check valve: Steel

Pressure

- Working pressure: 32 MPa (320 bar)
- Test pressure: 48 MPa (480 bar)
- Burst pressure: 96 MPa (960 bar)
- Pulse pressure fatigue test: 1 000 000 cycles with pressure from 0 to 32 MPa (320 bar)

Bypass valve

- Opening pressure 600 kPa (6 bar)
- Other opening pressures on request.

Δp element type

- Microfibre filter elements - series N-R: 20 bar
- Microfibre filter elements - series H-S: 210 bar
- Wire mesh filter elements - series N: 20 bar
- Fluid flow through the filter element from OUT to IN.

Seals

- Standard NBR series A
- Optional FPM series V

Temperature

From -25 °C to +110 °C

Connections

In-line Inlet/Outlet

Note

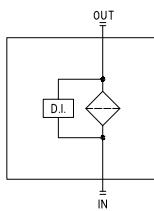

FMP filters are provided for vertical mounting

Weights [kg] and volumes [dm³]

GENERAL INFORMATION FMP

The curves are plotted using mineral oil with density of 0.86 kg/dm³ in compliance with ISO 3968.
Δp varies proportionally with density.

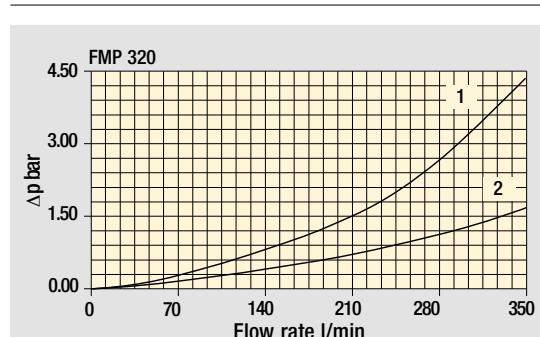

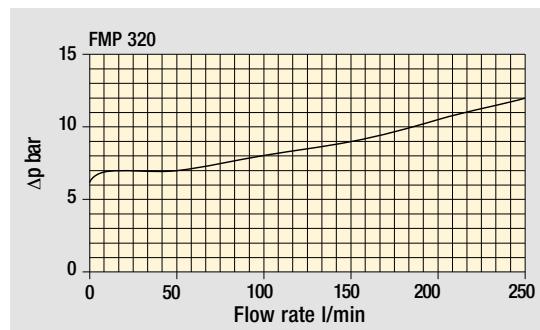

Pressure drop

Filter housings Δp pressure drop

Bypass valve pressure drop

Filter housing with check valve

- 1 - Reverse flow
- 2 - In filter direction

Valves

FMP FMP065 - FMP135 - FMP320
